

CCSI Technology Solutions Assessment Programs

CCSI Technology Solutions believes strongly in ensuring our clients have a thorough understanding of the tools and technologies available to them to better manage their Windows infrastructure. For customers embarking on Vista Migrations or those wanting to better maintain their environments, CCSI is offering two programs designed to assist with the evaluation and assessment of these advanced management tools. Through round table discussions; informal knowledge transfer and demonstrations of the various tools, an organization's IT staff can learn and see firsthand how these tools can be utilized within their own environment.

Application and Device Compatibility Engagement (ADCE) Initiative

The application and device compatibility assessment project is a 2 – 3 day structured engagement delivered by CCSI Technologies Services' Professional Services group. This assessment is designed to analyze a customer's desktop application and device compatibility within a Microsoft Windows Vista Migration initiative. Based on a representative sampling of applications selected together with the customer, we will be able to develop recommended next steps. Using a sampling of applications, the assessment allows CCSI Technology Solutions to classify applications into a one of several categories, such as Vista blockers vs. applications that do not require remediation.

- Conducted onsite with customers prior to Windows Vista migration.
- Leverages both the Microsoft Application Compatibility Toolkit 5.0 (ACT) and Microsoft Assessment and Planning Toolkit (MAP)
- The cost of the ADCE assessment may be subsidized by Microsoft; nomination process required.
- Recommendation on next steps are provided at the end of the assessment for both application remediation and device coverage.

Right size, right choice;
a foundation for success...

CCSI Technology Solutions Assessment Programs

Microsoft Desktop Optimization Pack Proof of Concept - MDOP PoC

The Microsoft Desktop Optimization Pack (MDOP) for Software Assurance is a suite of five products sold as an add-on subscription license available to Software Assurance customers. MDOP uses innovative technologies to help reduce the total cost of ownership (TCO) of the Windows desktop by accelerating operating system and application management and enhancing IT responsiveness and user uptime. MDOP will enable you to better control the desktop, accelerate and simplify desktop deployments and management, and create a dynamic infrastructure by turning software into centrally managed services.

The Microsoft Desktop Optimization Pack Proof of Concept - MDOP PoC is a 3 – 5 day structured engagement delivered by CCSI Technologies Services' Professional Services group. This proof of concept is design to demonstrate the components of MDOP and help customers see the value and ease of use of these tools within their Windows environments.

- Available to all Microsoft Customers – SA Benefit not required.
- Conducted onsite with customers.
- Leverages some or all components of MDOP:
 - Microsoft Advanced Group Policy Management 2.5
 - Microsoft Desktop Error Monitoring 3.0
 - Microsoft Asset Inventory Service 1.0
 - Microsoft Diagnostic and Recovery Toolset 5.0
 - Microsoft SoftGrid Application Virtualization 4.1 SP1 / 4.2
- The cost of the MDOP PoC may be subsidized by Microsoft; nomination process required.
