

WHAT'S NEW: SYMANTEC™ ENDPOINT PROTECTION MR3 & MR4 AVAILABLE NOW!

Symantec Endpoint Protection 11.0 MR3 provides expanded customization, management and performance enhancements including optimized client and server performance, further scalability controls, and virtualization support. MR3 builds upon the previous maintenance releases enabling comprehensive protection and optimal performance for all environments.

MR3 INCLUDES THE FOLLOWING IMPROVEMENTS:

- **Improved Client Performance**
Benefit: Code optimizations have been made on the client to reduce the amount of disk activity and the amount of resources used during startup. Customers will notice decreased SEP startup time and improved experience in other applications since client performance has been optimized.
- **Improved Management Server Performance**
Symantec Endpoint Protection Manager will now utilize fewer system resources to perform standard functions. SEPM impact to server performance has been reduced to ensure other applications and services running on the system are minimally impacted.
- **Additional Flexibility Controls**
Additional granular access controls to the Limited Administrator role enable more administrative rights assignment flexibility.
- **Scalability improvements**
Scalability improvements to Group Update Provider increase the number of clients reporting into a Group Update Provider to receive content updates. Additional configuration options will also allow customization for the amount of content and disk space size; allowing a GUP to balance the need to update clients who are offline for an extended period of time.
- **Virtualization Support**
Randomize Client connections to SEPM for obtaining Content Updates. This ensures less chance of heavy disk reading and writing due to the SEP client on different virtual machines loading new content at the same time. Content downloads are streamlined and more virtualization friendly.
- **Other Features:**
 - . Extended support for DHCP-based NAC technology
 - . Computer Status and Clients View modifications
 - . Automatic download of new releases to SEPM console via LiveUpdate
 - . Trialware now available for both Endpoint Protection and Network Access Control in one download on FileConnect: <https://fileconnect.symantec.com/LangSelection.jsp>

Symantec Endpoint Protection 11.0 MR4 provides all the features and benefits found in MR3 but also includes support for additional operations systems.

MR4 INCLUDES ADDITIONAL SUPPORT FOR THE FOLLOWING:

- **Windows Operating Systems (32-bit and 64-bit)** – for client and management server
 - . Microsoft Windows Small Business Server: Standard Edition, Premium Edition
 - . Microsoft Windows Essential Business Server: Standard Edition, Premium Edition
 - . Microsoft Windows Server 2008: Standard Edition, Enterprise Edition, Datacenter Edition, Web Edition
